

The screenshot shows the Visual Studio Code interface with a file explorer on the left containing files like `calculadora.py`, `first.py`, `imprimir.py`, `laboratorio1.py`, `README.md`, and `saludar.py`. The main editor displays the content of `laboratorio1.py`, which is a Python script with a docstring and two print statements. The terminal at the bottom shows the command to run the script, which executed successfully, outputting "Hola, Mundo" and "Bryan Adrian Reyes Ibarra".

```
1 '''
2 Nombre: Bryan Adrian Reyes Ibarra
3 Fecha: 18 DE Septiembre
4 Description:
5 Laboratorio: 2.1.1.6
6 '''
7
8 print("Hola, Mundo")
9 print("Bryan Adrian Reyes Ibarra")
10
```

Terminal output:

```
PS C:\Users\bryan\programacion-redes-2023-4t> & C:/Users/bryan/AppData/Local/Programs/Python/Python311/python.exe c:/Users/bryan/programacion-redes-2023-4t/laboratorio1.py
Hola, Mundo
Bryan Adrian Reyes Ibarra
PS C:\Users\bryan\programacion-redes-2023-4t>
```

The screenshot shows the same Visual Studio Code interface, but the terminal now displays a `SyntaxError`. The error message indicates an "invalid syntax" on line 9 of `laboratorio1.py`, specifically pointing to the `print(Bryan Adrian Reyes Ibarra)` statement. The error message suggests that a comma might be missing at the end of the string in the print statement.

```
1 '''
2 Nombre: Bryan Adrian Reyes Ibarra
3 Fecha: 18 DE Septiembre
4 Description:
5 Laboratorio: 2.1.1.6
6 '''
7
8 print("Hola, Mundo")
9 print(Bryan Adrian Reyes Ibarra)
10
```

Terminal output:

```
PS C:\Users\bryan\programacion-redes-2023-4t> & C:/Users/bryan/AppData/Local/Programs/Python/Python311/python.exe c:/Users/bryan/programacion-redes-2023-4t/laboratorio1.py
File "c:\Users\bryan\programacion-redes-2023-4t\laboratorio1.py", line 9
    print(Bryan Adrian Reyes Ibarra)
          ^^^^^^^^^^^^^^^^^
SyntaxError: invalid syntax. Perhaps you forgot a comma?
PS C:\Users\bryan\programacion-redes-2023-4t>
```
